

Blueprint for camera positioning

The photo above gives you an overview of where the cameras should be positioned. So **focus your attention only on the cameras.**

As we have informed you, you must use at least three or more cameras for this purpose. All these cameras must be active at the same time and connected by a zoom. You are participating in a critical juncture in your organization. This audit makes full use of Internet-linked technology. Therefore, your officers participating in this should be well versed in the use of modern technology.

Functions of cameras;

The main purpose of this camera is to cover the entire office. It should be placed there without any movement. Therefore, this camera should be placed where the entire office is covered. If you can use a wide, ultra wide technology mobile phone with 3 or 4 cameras, we recommend that it is more suitable.

The primary purpose of this camera is to capture the presentations and explanations made by the officers. For example, this camera captures an explanation or a file displayed by an officer named "X".

The main purpose of this camera is to cover the entire office. It should be placed there without any movement. Therefore, this camera should be placed where the entire office is covered. If you can use a wide, ultra wide technology mobile phone with 3 or 4 cameras, we recommend that it is more suitable.
